

Custom Machinery

ITAC Custom Machinery is the one-stop shop for a client’s machine needs, from new designs to retrofitting existing machines. The company is dedicated to providing punctual design and fabrication of custom parts and assemblies and to seeking improved safety, function, and production while simultaneously reducing operating and maintenance requirements. ITAC’s primary design consideration is to reduce downtime and changeover time with the least impact on revenue. It has the technology and experience to do just that in providing custom machine fabrication to its clients.

ITAC’s design capabilities extend from the world of inventions to the world of designing and manufacturing prototype machines. ITAC Custom Machinery excels at discovering new ways to accomplish old tasks in order to revolutionize the machine design field.

Proficient in both common and exotic materials, ITAC Custom Machinery manufactures its own designs as well as products designed by others. It incorporates both Computer Numerical Control (CNC) and manual machines in daily operations and is capable of producing quantities as low as one with few restrictions on maximums.

Rest assured that no job is too small for ITAC Custom Machinery, and it takes great pride in its reputation as “the go-to” when emergencies arise. We are willing to assume the jobs that few others desire while maintaining flexible schedules that allow us to respond to our clients when they need it most.

MACHINE DESIGN EXPERTISE

- Custom Mechanical Engineering & Machine Design Services
- 3D Modeling (AutoCAD and AutoDesk Inventor)
- Prototypes – Parts and Machines
- Machine Guarding
- Reverse Engineering
- Parts and Tooling
- Jigs and Fixtures
- Lifting Tools
- Custom Mechanical Engineering & Machine Design Services
- Design/Build Capability
